HarborHoist Latest in Innovation from HydroHoist®

Claremore, OK – HydroHoist Marine Group, the leader in the boat lift industry, has launched the newest addition to its line of boat lifts.

The HarborHoist™ Gen2 is the most versatile boat lift in the HydroHoist family — perfect for fresh, brackish and salt water.

“We are excited to offer the newest version of our HarborHoist, which we believe will revolutionize safe boat storage in many areas of the country,” said HydroHoist Marine Group President & CEO, Mick Webber.

HarborHoist is a free-floating lift and is compatible with fixed or floating docks, and works in a U-shaped slip, double-wide slip, L-shaped dock, and square dock. The hull supports can be configured for nearly all boat styles, including inboard, wake, pontoon, and tritoon boats

The HarborHoist™ Gen 2 level lifting frame is constructed with aircraft grade aluminum and rugged marine polyethylene tanks. It accommodates boats ranging from 4400 pounds to 18,000 pounds.

"An outstanding feature of the HarborHoist lift is its adaptability with various types and shapes of docks," Webber said.

The unit can simply be tied to the dock or use a conventional mooring system. HarborHoist comes standard with a push button control unit – utilizing an accelerometer for level lifting. Walkways are mounted to the top of the tanks that run the full length of the lift for easy access to your boat in both the up or down position.

“The accessibility and continuous, non-skid walkway makes this one of the most user-friendly hoists on the market,” Webber said.

Additional features include easy loading and unloading of passengers, adjustable hull pads, optional centering guides, and simple assembly and installation. The aluminum structure extends the life of the product,
